

# Environmentally Safe Fluids

*Greenland environmentally safe Hydraulic Oil is a great alternative to standard petroleum oils. Spills of Greenplus on the forest floor are rapidly biodegraded by naturally occurring soil organisms when exposed to air, making this an important product for protecting the environment. In addition to Greenplus Hydraulic Fluid and Chainsaw Bar Oil, we are the only dealer to stock 100% environmentally safe rock drill/air tool oil.*

## Environmentally Safe Rock Drill Oil

RDO 302 ES is a unique product developed for all types of drilling where rock drill oils are used, such as D.T.H., air tracks percussive drills, casing drivers and top hammers. RDO 302 ES reduces the potential of environmental damage during mining production, mineral exploration, construction and quarrying. It has proprietary lubricating compounds that are not washed off by moisture, thus offering protection when drilling with water. Rust does not develop on internal parts when the hammer is not used.

## Greenplus Hydraulic Fluid ES

Greenplus Hydraulic Fluid ES has high performance lubrication properties which result in significantly less wear on your equipment's hydraulic components. Greenplus Hydraulic Fluid ES is not just rapidly biodegradable, operator safe and made from renewable resources but it is also environmentally safe. Greenplus is compatible with most hydraulic systems and integrated parts.

## Greenplus Chainsaw Bar Oil ES

Greenplus Chain Saw-Bar Oil ES has excellent lubricating properties, often reducing consumption of oil by 50% when compared to petroleum based oil. Greenplus Chain Saw-Bar Oil ES significantly reduces operator health hazards associated with the use of mineral oil, such as skin, eye and lung irritations. Greenplus Chain Saw-Bar Oil ES will reduce oil consumption during operations because it has the ability to adhere to metal and to itself. Less oil is thrown off moving parts, Greenplus stays on the part and continues to lubricate.
